The role of Endocrine Disrupting Chemicals in the Developmental Origins of Disease: Overview and Personal Reflections

特邀专家

Jerrold (Jerry) J. Heindel

Director of the Commonweal Program, Healthy Environment and Endocrine Disruptor Strategies

Jerry has experiences in University of Texas Medical School at Houston; University of Mississippi; National Institute of Environmental Health Sciences (NIEHS). He is now retired from NIEHS and is currently the director of the Commonweal Program, Healthy Environment and Endocrine Disruptor Strategies, www.heeds.org and director of a small business to help scientists write grants for NIH , <http://grantsmanshipstrategies.com/>.

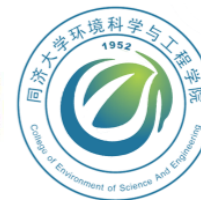

Over the past 25 years he has given over 125 invited presentations across the globe and published over 70 reviews and book chapters; mostly related to understanding the role of endocrine disrupting chemicals and the developmental origins of disease.

Endocrine disruption and the brain: insights from the rodent

特邀专家

Laura N. Vandenberg

Associate Professor and Graduate Program Director in the Department of Environmental Health Sciences at the University of Massachusetts Amherst

Trained as a developmental biologist and endocrinologist, Dr. Vandenberg's laboratory research examines how low level exposures to EDCs can induce diseases with particular interests in the effects of estrogenic compounds on breast cancer and works to determine when individuals are most susceptible to these exposures. Outside of the lab, her research critically evaluates issues that affect risk and hazard assessments for EDCs including low dose effects, non-monotonic dose responses, critical windows of susceptibility, routes of exposure, and testing methods. Dr. Vandenberg is an author on 85 peer reviewed papers and ten book chapters. She has served on a number of US and international expert panels to assess endocrine disrupting chemicals and is regularly asked to speak at conferences around the world.
